

Syland Flow Meter Cell

Special flow generating device

- *Sophisticated design*
- *For a monotonic velocity of the approaching flow*
- *Guarantees optimal reaction times*

Model summary

O₂

Syland Flow Meter Cell

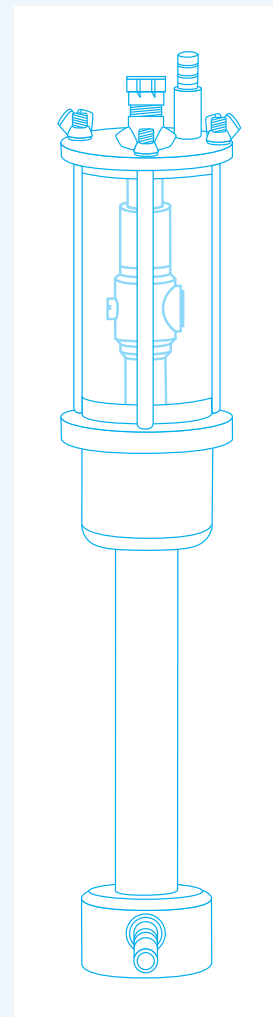

The Syland Flow Meter Cell is a sophisticated design, which guarantees optimal reaction times.

The water coming in at the bottom of the cell will be redirected by a hemispheric device. The water probe flows through a chaplet with 16 drill holes. In a standpipe closely covering the sensor the probe streams in parallel to the top. A mixture of the incoming probe with the water probe already in the cell is nearly omitted.

The following Syland models are standardly equipped with the Flow Meter Cell:

- 4002-FS
- 4002-DRS
- Multi Range 4002-DRS
- 6000-DRS

Technical details are subject to change. Errors excepted.
